

## Call for ACoP10 Pre-Conference Hands-On Session Presenters

### [Clinical Pharmacometrics: Bringing Models to Patients](#)

The ACoP10 pre-conference, entitled "[Clinical Pharmacometrics: Bringing Models to Patients](#)" will take place on Sunday, October 20th, 2019, and will include multiple sessions providing comprehensive coverage of various aspects in this area with representation from industry, CROs, academia, FDA and clinicians. The detailed program is now available and posted [online](#).

As part of the ACoP 10 pre-conference, there is an opportunity for individuals/groups with a bedside pharmacometric tool currently being used in clinical practice to demonstrate their tool in an interactive setting during the hands-on session. Each presenter will be able to demonstrate their application/tool to preconference attendees, while answering audience questions. ACoP will provide tables and display monitors. Presenters are required to bring their own laptops and/or devices they may need for the demo. The session will be approximately 60-75 minutes in duration.

Interested individuals are requested to submit a one page description of their tool to [precon@go-acop.org](mailto:precon@go-acop.org) by May 10, 2019. In the description, please include details on number and geographical location of current users (patients, providers), brief description about the model/software qualification process, regulatory status (if applicable) and relevant information to allow pre-conference organizers to make an informed selection. Selection will be based on diversity of tools and unique elements that highlight use of pharmacometric tools at the patient bedside.
